What we're able to do is basically control what they are doing at the time, and see what they're doing before and after. Paul Dorn: There are a lot of features in AutoCAD Activation Code that are great, but there are also some that we're rethinking and making sure are still very valuable to the community, so we're changing things. A little more time is needed for the viewer to display the computed extents in this method because it requires the viewer to be launched for the extents to be computed and displayed. The user is required to configure the Extents setting in AutoCAD in order for the method to work properly. It is recommended that you save your AutoCAD drawing as a PDF first so that the extents of the drawing are already computed. This may speed up the process.
